Genes homologous with organic cation transporters OCT1 and OCT2, useful in design of new drugs for treatment of diseases due to abnormality of the transporter functions

Claim 2; Page 45-51; 97pp; Japanese.

The present sequence encodes a protein with cation transporting activity. The genes are significantly homologous with organic cation transporters OCT1 and OCT2. The genes may used in drug development, particularly in the treatment of diseases due to abnormality of the organic cation transporter functions e.g. fatty liver, heart diseases and cancers, by controlling such as by inhibition or activation. Administration of anti-tumour and anticancer drugs in combination with a transporter protein inhibiting agent allows the agents to penetrate into the diseased cells to enhance the drug action.

  The present sequence encodes a protein with cation transporting activity. The genes are significantly homologous with organic cation transporters OCT1 and OCT2. The genes may used in drug development, particularly in the treatment of diseases due to abnormality of the organic cation transporter functions e.g. fatty liver, heart diseases and cancers, by controlling such as by inhibition or activation.

Administration of anti-tumour and anticancer drugs in combination with
                                                                                                                                                                                                                                                                                                                          WPI;

The genes are significantly homologous with organic cation transporters OCT1 and OCT2. The genes may used in drug development, particularly in the treatment of diseases due to abnormality of the organic cation transporter functions e.g. fatty liver, heart diseases and cancers, by controlling such as by inhibition or activation. Administration of anti-tumour and anticancer drugs in combination with a transporter protein inhibiting agent allows the agents to penetrate into the diseased cells to enhance the drug action.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Genes l

                                                                                                                                                                                                                                                                                                                                 This sequence represents the cDNA encoding the human carnitine transporter protein OCTN2. The sequence can be used as a target for diagnosis of systemic carnitine deficiency by detecting the presence of mutations in the sequence, especially seen in the disease juvenile visceral steatosis (jvs). The wild type OCTN2 gene can be used in the gene therapy of the disease state.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Systemic carnitine deficiency cation transporter, useful as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Вр
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biplogical activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1722

AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence encodes a protein with cation transporting activity. The genes are significantly homologous with organic cation transporters OCT1 and OCT2. The genes may used in drug development, particularly in the treatment of diseases due to abnormality of the organic cation transporter functions e.g. fatty liver, heart diseases and cancers, by controlling such as by inhibition or activation. Administration of anti-tumour and anticancer drugs in combination with a transporter protein inhibiting agent allows the agents to penetrate into the diseased cells to enhance the drug action.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1684
                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents the cDNA encoding the mouse carnitine transporter protein OCTN2. The corresponding human sequence (AAA09889) can be used as a target for diagnosis of systemic carnitine deficiency by detecting the presence of mutations in the sequence, especially seen in the disease juvenile visceral steatosis (jvs). The wild type OCTN2 gene can be used in the gene therapy of the disease state.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Organic cation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mouse OCTN2 cDNA

protein (OCTN3). Also describes a mouse organic cation transporter protein (OCTN3). Also described are: (1) a method for screening compounds for their ability to regulate the transport of an organic cation into the cell, by generating a cell expressing OCTN3 at the cell membrane, contacting with the compound and organic cation, and observing the degree of transport of the organic cation, and

                                                                                                                      The present invention describes a method for detecting the presence polymorphisms associated with inflammatory bowel diseases such as ulcerative colitis and Crohn's disease. The methods can be used to the presence of genetic polymorphisms associated with inflammatory disease and correlating their occurrence with disease states. They used in this way for phenotypic correlations, forensics, paternity testing, medicine and genetic analysis. The present sequence is a generation of the present sequence of the present sequence is a generation of the present sequence of the present sequence is a generation.

The methods can be used to othe presence of genetic polymorphisms associated with inflammatory be disease and correlating their occurrence with disease states. They mused in this way for phenotypic correlations, forensics, paternity testing, medicine and genetic analysis. The present sequence is a geometric polymorphic site described in the exemplification of the containing a polymorphic site described in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; inflammatory bowel disease; Crohn's disease; ulcerative colitis; single nucleotide polymorphism; SNP; chromosome 19p13; paternity test; chromosome 5q31-33; forensic test; gene therapy; ds.

                                                                                                                                                                                                                               This sequence represents the genomic DNA encoding the human carnit transporter protein OCTN2 (AAY83929). The complete genomic sequence contains 9 introns dispersed throughout the gene. The gene can be as a target for diagnosis of systemic carnitine deficiency by deta the presence of mutations in the sequence, especially seen in the disease juvenile visceral steatosis (jvs). The wild type OCTN2 general steatosis (jvs)

                                                                                                                                                         the presence of genetic polymorphisms associated with inflammatory disease and correlating their occurrence with disease states. They used in this way for phenotypic correlations, forensics, paternity testing, medicine and genetic analysis. The present sequence is a genetic ontaining a polymorphic site described in the exemplification of the present sequence.
                                                                                                                                                                                                                         The present invention describes a method for detecting the presence polymorphisms associated with inflammatory bowel diseases such as ulcerative colitis and Crohn's disease. The methods can be used to contain the colitis and Crohn's disease.
                                                                                                                                                                                                                                                                                                        Testing for the bowel disease,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Q
                                                                        the presence of genetic polymorphisms associated with inflammatory disease and correlating their occurrence with disease states. They used in this way for phenotypic correlations, forensics, paternity testing, medicine and genetic analysis. The present sequence is a goot containing a polymorphic site described in the exemplification of the present sequence.
                                                                                                                                                                                               The present invention describes a method for detecting the present polymorphisms associated with inflammatory bowel diseases such a ulcerative colitis and Crohn's disease. The methods can be used
                                                                                                                                                                                                                                                                                                                                                Testing for the presence of polymorphisms associated with inflammatory bowel disease, using a hybridization assay - \!\!\!\!
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2122

                                                                                                                    the presence of genetic polymorphisms associated with inflammatory disease and correlating their occurrence with disease states. They used in this way for phenotypic correlations, forensics, paternity testing, medicine and genetic analysis. The present sequence is a containing a polymorphic site described in the exemplification of the present sequence.
                                                                                                                                                                                                                                                                                                                  The present invention describes a method for detecting the presence polymorphisms associated with inflammatory bowel diseases such as pulcerative colitis and Crohn's disease. The methods can be used to contain the colitis and color of the colitis and color of the c
